Product Data Sheet

Fiber optic jacket stripping tool

Part Number: LAN-FT-STR/OFC

Fiber optic jacket stripping tool LAN-FT-STR/OFC: specifications, description, purpose and use in structured cabling, data center and LANMASTER infrastructure projects.

Description

The tool is designed to strip jackets and coating removal when working with optical cables.

The product is equipped with a handle return mechanism and a handle lock (storage mode).

The stripper handles are equipped with ergonomic rubberized PVC pads.

The working surfaces of the jaws have grooves for stripping optical fibers (900 µm) and grooves for removing the acrylic coating (250 µm).

There is a mechanism for setting the adjustment of the handles squeeze for easy operation. To adjust the stop, you need a hex wrench (not included in the tool set).
