Product Data Sheet

Containment system 1200 mm wide split hinged door for DC series 42U cabinets, glass, key-card lock

Part Number: LAN-DC-HDRML-42Ux12

Containment system split hinged door for DC series cabinets

Description

A doors kit is installed between the end cabinets in rows to form an isolated aisle. Basic doors are used for a 1200 mm wide aisle, on request it is possible to manufacture doors of other widths. Transparent glass windows in the door panels allow for visual control of the situation inside the aisle.

Split hinged doors have a mechanical opening system. The doors can be equipped with an access control system to the interior of the aisle, which greatly increases the security level of the aisle containment system.

Made of sheet steel (powder coated) and toughened glass.

Kit includes: two swing doors, door frame, gaskets, and fasteners. Swing doors with a lock are supplied with wires, start buttons, necessary accessories.
